SUMMARY

Strong in design and integration with intuitive problem-solving skills. Proficient in front-end technologies for web development and Android development technologies such as Kotlin, XML, Compose, and familiar with backend technologies like Node.js. Skilled at translating business requirements into technical solutions. Eager to contribute to innovative projects and collaborate with teams at a forward-thinking company to further develop my skill set.

EDUCATION

Shantilal Shah government engineering college
Bachelor of Engineering (Information Technology)

Aug 2020 - May 2024
Bhavnagar, Gujarat

TECHNICAL STRENGTHS

Computer Languages	Java, Kotlin, XML
Frameworks	Android SDK, Jetpack Compose
Libraries & Tools	Retrofit, Room, Firebase, Git, Jitpack Etc
Courseworks	OOPs, DBMS, OS, Computer Networks.
Other Skills	Javascript, NodeJS, PHP

EXPERIENCE

Plusinfosys

July 2024 - May 2025

Android developer

- Developed and maintained advanced applications for warehouse management and other custom projects, following MVVM architecture for scalability and maintainability.
- Worked extensively with Android components, including BroadcastManager, WorkManager, Activities, Fragments, and Services, implementing best practices for each.
- Integrated third-party libraries such as Retrofit, Room, FusedLocation, and Jetpack Compose to enhance app functionality and performance.
- Collaborated with cross-functional teams to ensure code quality, maintainability, and adherence to industry best practices through code reviews and version control.

Plusinfosys

Jan 2024 - June 2024

Android Developer Internship

- Gained hands-on experience with core Android components (Activities, Fragments, Services) and their lifecycles, while learning MVVM architecture and industry best practices for app performance and scalability.
- Worked with Android tools and technologies, including Kotlin, Jetpack Compose, Retrofit, Firebase, and Room, applying them in real-world development scenarios.
- Acquired foundational web development knowledge (HTML, CSS, JavaScript, Bootstrap), enhancing my skill set across both mobile and web platforms.

Highsense Infotech

Jul 2023 - Aug 2023

Web Developer Internship

- Gained practical experience in PHP, developing dynamic web applications and understanding its integration with front-end technologies.

- Learned to use jQuery and Bootstrap to enhance web page interactivity and design, ensuring responsiveness and user-friendly interfaces.
- Worked with PHPMyAdmin for database management, creating and managing databases to support project functionality.

PROJECTS

LogBus

Kotlin, Jitpack

Android Logging Library

- Created a customizable and lightweight Android logging library in Kotlin, designed for asynchronous logging with clean architecture principles.
- Implemented logging levels (INFO, DEBUG, VERBOSE, WARNING, ERROR) with support for routing logs to multiple destinations.
- Developed built-in routes such as LogcatRoute, FileRoute, and CrashlyticsRoute, enabling developers to configure outputs based on their app's needs.
- Enhanced developer experience by formatting logs with visual clarity using boxed layouts, emojis, and text wrapping.
- Integrated persistent crash logging through CrashlyticsRoute, saving uncaught exceptions and stack traces to file storage for post-crash diagnostics.
- Published the library to Jitpack.io, making it easy for other developers to integrate and contribute.

Streefi

Kotlin, XML, fusedLocationApi, Firebase

Food Delivery Application

- Developed a multi-platform food delivery system consisting of three apps: Streefi Customer, Streefi Vendor, and Streefi Delivery Partner, all utilizing Firebase Firestore as a common database.
- Implemented features for the Streefi Vendor app to manage items, track orders, and update product availability in real-time.
- Designed the Streefi Customer app with an intuitive UI for browsing, adding items to the cart, and placing orders seamlessly.
- Incorporated a geofencing feature, restricting customer orders to a specific serviceable area, ensuring that users can only place orders within predefined geographical boundaries.
- Utilized Firebase Cloud Messaging (FCM) to send notifications across all three apps, keeping vendors, customers, and delivery partners informed at each stage of the order process.

Wedding Baazar

HTML, CSS, JavaScript, jQuery, Bootstrap, PHP, PHPMyAdmin

Matrimonial website

- Developed a fully functional matrimonial website with features such as Login/Register, Profile Management, Profile Verification, and Match Requests using HTML, CSS, JavaScript, jQuery, Bootstrap, and PHP.
- Integrated PHPMyAdmin for database management, ensuring seamless data handling for user profiles, match requests, and notifications.
- Created an Admin Panel with full access to all user data, profile verifications, and match request approvals, providing site administrators complete control over the platform.
- Implemented real-time notifications to inform users of profile updates, match requests, and other relevant activities to enhance user engagement.
