

Job Title: Quality Analyst Tester

Ideal Candidate:

As an ideal candidate, you're a Quality Analyst Tester who knows how to turn detailed requirements into thorough testing strategies that ensure flawless, high-quality software. Your focus will be on identifying bugs, validating functionality, and enhancing user experience through meticulous testing and collaboration with development teams. Let's elevate our product quality—and your career—to the next level!

What you'll be doing:

- Develop detailed test plans, cases, and scripts tailored to React and Laravel applications.
- Perform manual and automated testing to validate application functionality against requirements.
- Identify, document, and track defects using bug tracking tools. Collaborate with developers for resolution.
- **React Testing:**
 - ❖ Test React components for rendering accuracy and user interactions using tools like Jest and React Testing Library.
 - ❖ Ensure proper state management using Redux or Context API.
- **Laravel Testing:**
 - ❖ Validate backend functionality, including API endpoints, database interactions, and business logic.
 - ❖ Perform unit testing using PHPUnit or similar frameworks.
- Verify seamless integration between React front-end and Laravel back-end components.
- Assess application speed, scalability, and responsiveness under varying conditions.
- Ensure new changes do not negatively impact existing features.
- Maintain comprehensive records of test results, defect reports, and testing processes.

- Work closely with cross-functional teams to provide feedback on design and implementation.

To Succeed this role:

- Bachelor's degree in Computer Science, IT, or related field.
- Proven experience in software testing with a focus on React and Laravel frameworks.
- Familiarity with front-end testing tools (e.g., Jest, React Testing Library) and Laravel testing tools (e.g., PHPUnit)
- Proficiency in JavaScript (React) and PHP (Laravel).
- Strong knowledge of RESTful APIs and database testing (MySQL/PostgreSQL).
- Experience with version control systems like Git.
- Familiarity with CI/CD pipelines for automated testing.
- Excellent analytical skills for problem-solving.
