- **Academic Level:**
 - Web Development, Android Development, Database Management, SDLC Lifecycle, Manual Testing
- **Software & Frameworks:**
 - SAP, React, jQuery, Angular, VS Code, Selenium
- **Core Knowledge:**
 - SAP SD, SAP PP
- **Languages:**
 - C, C++, Java(basics), Python, JavaScript and PHP

PROJECTS

Meme Generator: ReactJs (internship Project)

- The most significant project I worked on was “Meme Studio” where I designed the UI using React. This project helped me understand the importance of user-centered design and how to organize and structure a complex application interface efficiently.

Gesture Based Home Automation: IoT (BE Project)

- The project is built on Arduino UNO and has LCD module for the user interface, APDS-9960 gesture sensor for user input and a relay circuit to drive appliances ON or OFF, interfaced to it. This project is developed in C++. An open-source library for interfacing APDS-9960 gesture sensor with the Arduino is utilized in the project. The Arduino code (C++) is written on the Arduino IDE and burnt to the board.
