PROJECT

1. Banking Management System - using Python

The Banking Management System is a Python program that can store your bank account and the amount to be credited. The purpose of the system is to help you track your transaction details. It allows the interface for various operations such as opening a new Bank account, depositing money, withdrawing money, checking bank balance, etc.

2. Library Management System

The Library Management System in MySQL is a database-driven project designed to efficiently handle the day-to-day operations of a library. It provides a structured way to manage book records, member details, issue/return transactions, and fine calculations, ensuring smooth and organized library operations. Key features include add/update/delete titles, authors, categories, copies, and availability status.

COURSES

Full Stack Python from Aptech (Bengaluru)

SKILLS

- MySQL
- Python
