
About Project

Meri TRACK is a cutting-edge mobile application designed specifically for hospital authorities to streamline the management of surgical and medicine inventory. Our app offers a user-friendly interface that enables healthcare professionals to efficiently store, track, and manage vital inventory data in real time. Meri TRACK is committed to enhancing hospital operations, reducing administrative burdens, and ultimately improving patient care. Join us in revolutionizing the way healthcare facilities manage their inventory!

Grid System

The grid system in design is a structured framework that helps designers organize content within a layout. It consists of a series of intersecting horizontal and vertical lines that create a grid, allowing for the alignment of elements in a cohesive and visually appealing manner.
